Education

Rajiv Gandhi University of Knowledge Technologies RK Valley <i>Bachelor of Technology in Computer Science and Engineering</i> • CGPA: 9.1 / 10.00 • Advisor: Prof. Ravi Kumar Penugonda	2021–2025 Andhra Pradesh
Rajiv Gandhi University of Knowledge Technologies RK Valley <i>MBIPC (11th&12th)</i> • CGPA: 9.85 / 10.00	2019–2021 Andhra Pradesh

Research Areas

Speech and Audio: text-to-speech (TTS), voice conversion (VC), sound event detection (SED) and automatic audio captioning (AAC)

Experience

Project Associate, IIT Madras <i>SPRING Lab, Department of Computer Science and Engineering</i> • Working under Prof. S. Umesh on Text-to-Speech (TTS) and Voice Conversion systems as part of the <i>Speech Technologies in Indian Languages</i> project. • Analyzing and modifying TTS and Voice Conversion architectures for low-resource multilingual adaptation, with a focus on improving duration modeling and alignment stability. • Studying discrete speech units from self-supervised learning (SSL) models for unit-to-speech generation and evaluating their suitability for multilingual speech synthesis.	October 2025 – Present Chennai
Research Intern, IIT Hyderabad <i>Department of Electrical Engineering</i> • Worked under Prof. K. Sri Rama Murty in the Speech Information Processing Lab on the Robot Audition (DRDO) project. • Developed models for audio tagging, sound event classification, and audio search in dynamic environments. • Proposed a unified encoder architecture for reference-guided targeted sound detection in audio mixtures, enabling reliable detection of specific target sounds in complex acoustic environments. • Designed a custom lightweight decoder architecture for audio captioning and incorporated AudioSet-based semantic representations to improve caption generation performance.	May 2024 – Sep 2025 Hyderabad

Projects

Automatic Audio Captioning using PANNs CNN14, ConvNeXt, and BART • Built an Automatic Audio Captioning (AAC) system using PANNs CNN14 and ConvNeXt as audio encoders and BART as the transformer-based decoder. • Processed raw audio into log-mel spectrograms and trained the system on Clotho, AudioCaps, and WaveCaps datasets for diverse caption learning. • Enhanced BLEU score through effective model fine-tuning on multi-dataset training, improving the quality and relevance of generated audio captions.
Sound Event Detection using PANN CNN14 • Fine-tuned the PANN CNN14 model for sound event detection across 18 classes, achieving high accuracy in identifying various audio events. • Integrated the model with Robot Operating System (ROS) for real-time performance, enabling seamless audio classification and interaction in dynamic environments. • Utilized advanced techniques, such as data augmentation and feature extraction, to enhance the model's robustness and performance in diverse acoustic conditions.

Stress Analysis

- Collected data from approximately 800 participants in my surroundings for stress analysis, focusing on identifying factors contributing to stress and understanding stress patterns across different age categories.
- Conducted comprehensive data analysis to identify key stressors and their impact, determining which age groups were most affected and exploring changes in habits and behaviors associated with stress.

Skills

Programming: Python

Tools & Systems: Linux, Git, ROS2

libraries: PyTorch, TensorFlow, NumPy, Pandas, matplotlib, HuggingFace, Librosa
